

ALL IN ONE EHR

EXTENDED PROFILE

OVERVIEW

All in One EHR provides a cloud-based specialty specific health record management platform suitable for small medium and large practices.

All in One EHR has used a user-centric architecture to structure their various products around that can offer everything from certified EHR management to revenue cycle processing. The EHR interface has a 5-star usability certification from the Commission on Health IT amongst other certifications.

The CureMD premise was to develop a system that could provide technologically efficient software use to every person within the architecture of care for a patient. This integrative approach allowed for the creation of products that can support point of care decision by presenting integrated notes from all areas of care in one screen flow. All in One EHR can be used by physicians, payers, and consumers. It can easily adapt to integrate PHR information into the hosted EHR as well.

CureMD products require an initial investment for set-up but then is maintained through a subscription service that allows for tiers of functionality. This replaces the model of system change and upgrades management which can disrupt clinician workflow. The adaptability of their systems is made possible by the initial funding, while the subscription helps healthcare financial cycles stay within their targeted areas.
