CARELOGIC EHR

EXTENDED PROFILE

qualifacts

OVERVIEW

Developed by Qualifacts, Carelogic EHR is a system for the behavioral health and human services sector. Carelogic EHR is a web-based system.

Carelogic EHR can be used across a host of medical specialties but has been designed for use primarily in cardiology, family medicine, internal medicine, pediatrics, multi-specialty and OBGYN practices. It is used by more than 300,000 medical staff across the US.
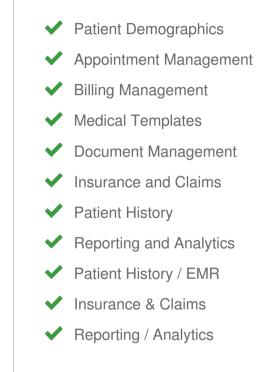

The Carelogic EHR application supports laboratory integration, SOAP notes, progress notes, and electronic prescriptions. When integrated with patient scheduling, it gives front-office staff access to appointment reminders and allows them to schedule rooms. The billing module supports eligibility inquiries, claims scrubbing, and direct-to-carrier claims.

Carelogic EHR offers document storage and tracking with the ability to scan and import multiple types of paper and electronic documents and then manage them according to patient history and condition. It also gives a practice the option of recording and tracking patient demographics - showing both history and health status across an area and by age.

Clinicians can send clinical information to a patient's personal health record as well as securely share a patient's health information across the medical community.

Access to Carelogic EHR can be on both desktop PCs and Macs as well as tablet and mobile devices.

FEATURE OVERVIEW

✔ Patient Demographics

✔ Appointment Management

✔ Billing Management

✔ Medical Templates

✔ Document Management

✔ Insurance and Claims

✔ Patient History

✔ Reporting and Analytics

✔ Patient History / EMR

✔ Insurance & Claims

✔ Reporting / Analytics
