

EYEMD EMR

EXTENDED PROFILE

OVERVIEW

EyeMD EMR is a software system suitable for general practice use but it specializes in providing solutions for ophthalmologists. The software system is able to work alongside an existing practice management system and can import patient and appointment information into its own dashboard.

EyeMD offers a single interface for easier adoption across multiple departments and provides healthcare users with access to full patient data and diagnostic test results. The specialized and customizable templates allow updating and management of workflows, tracking of patients, and task assignment.

The system includes e-prescribing and allows practices to import all patient data and appointment information from an existing practice management system. EyeMD automatically suggests charges per patient and can then export this data to an existing practice management system. It can also import notes from Medinotes.

EyeMD has a dedicated mobile application, and the main system has been optimized for mobile use to allow it to be run on a smartphone or tablet. The system is installed on the practice's own servers but operates a push synchronization server to update remote access to the most up-to-date information and EyeMD offer a free server monitoring service.
